

Common types of email error

<i>Mistake</i>	<i>What happens in practice</i>
Wrong recipient	Autocomplete selects the wrong "James", or an old contact still has access.
Reply all	Internal context or sensitive details go wider than intended.
Wrong attachment	Similar filenames or old versions get attached - sometimes with hidden tabs, tracked changes, or metadata inside.
CC instead of BCC	Recipient addresses are exposed to everyone in a bulk message.
Wrong channel	Content gets forwarded to personal inboxes or non-approved tools to work around friction.
